Education

Toronto Metropolitan University (Toronto, ON) *09/2023 - Expected 04/2028*

Bachelor of Science in Computer Science cGPA: 4.19 / 4.33

– Academic Excellence Renewable Scholarship ($9000 total), renewed annually for maintaining a GPA of 4.15+

Experience

RBC Borealis *Toronto, ON*

Machine Learning Software Engineer Intern 01/2027 - 04/2027

– Incoming. Joining the Knowledge AI team behind RBC's firm-wide NLP assistant for internal policy questions.

Royal Bank of Canada (RBC) *Toronto, ON*

Software Developer Intern 05/2026 - 12/2026

– Completed 50+ full stack tickets in Angular, Spring Boot, and SQL for a mortgage pre-approval platform that has generated 20k+ leads since launch, including 15+ P1/P2 security fixes across 10+ repositories.
– Helped deliver a mortgage switch pre-approval flow from design to launch, now used by thousands.
– Built a Splunk dashboard monitoring production and UAT health, tracking errors, traffic, and lead volume.
– Built an image recognition PoC comparing designs to UAT to flag UI gaps, now adopted by designers.

Bimen Business Consultants *Toronto, ON*

Software Engineer Intern 05/2025 - 08/2025

– Helped build a React and Node.js warehouse management tool that lets a client accept, provision, and adjust stock based on incoming orders, replacing a slow, error prone Excel workflow.
– Automated filing of 500+ legal documents daily with PowerShell scripts and error alerts, saving 30 minutes per day.

Projects

Avion Rewards Multi-Agent Recommender *TechPowHer Hackathon*

LLM assistant for redeeming RBC Avion points. 2nd place of 22 teams (178 participants). 07/2026

– Tools & Technologies: React, Node.js, RBC LLM Gateway (GPT-4o mini)
– Built a multi-agent LLM pipeline that parses natural language redemption requests to extract user intent, with an orchestrator routing each request to category specific subagents (travel, merchandise, tech).
– Added a ranking agent that scores each recommendation against the user's redemption history, and an explanation agent that justifies picks on request (e.g. suggesting AirPods to pair with a recently redeemed laptop).
– Selected to present to VPs, SVPs, and chief architects to evaluate a path to production.

Robotic Arm Pick-and-Place with Reinforcement Learning *garciaa047/PandaPlaceRL*

MuJoCo environment where a Franka Panda arm learns pick-and-place via SAC + HER through curriculum learning.

– Tools & Technologies: Python, MuJoCo, Gymnasium, Stable-Baselines3, PyTorch, TensorBoard
– Designed a custom goal conditioned Gymnasium environment with 4D Cartesian control via damped least squares Jacobian inverse kinematics, sparse HER compatible rewards, and optional shaping terms.
– Achieved 96% to 100% success across three evaluation suites with fully randomized object and goal positions, converging in roughly 400k steps (about 1.5 hours on CPU).
– Engineered a six stage performance gated curriculum with mixed goal sampling and grasped starts, enabling sparse reward learning of grasping behaviours that random exploration never discovers.

Neural Network Image Classifier from Scratch *garciaa047/Neural-Network-Doodle-Recognition-System*

Built a feedforward neural network from scratch in NumPy achieving 96% test accuracy on 5 class doodle recognition.

– Tools & Technologies: Python, NumPy, Pillow, Tkinter
– Engineered a neural network (900→128→64→5) with manual backpropagation, Leaky ReLU, He initialization, softmax output, L2 regularization, momentum, and mini batch gradient descent, with no ML frameworks.

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, SQL
Frameworks & Libraries: PyTorch, JAX/Flax, Stable-Baselines3, Gymnasium, MuJoCo, NumPy, Pandas, Spring Boot, Angular, React, Node.js
Tools & Concepts: Git, GitHub Actions, Docker, TensorBoard, REST APIs, Agile/Scrum, Reinforcement Learning, Machine Learning, LLMs, Multi-Agent Systems, Imitation Learning (Behavior Cloning), Neural Networks, OOP
Coursework: Data Structures, Algorithms, Databases, Operating Systems, Computer Security
