EDUCATION

• Toronto Metropolitan University (Toronto, ON)

09/2023 – Expected 2027

Bachelor of Science in Computer Science

cGPA: 4.21 / 4.33

PERSONAL PROJECTS

• Neural Network Image Classifier from Scratch

Built a feedforward neural network achieving up to 94% test accuracy on 5 class doodle recognition using only NumPy.

- Tools & Technologies: Python, NumPy, Pandas, Pillow, Tkinter, OpenCV
- Engineered a neural network (900→128→64→5) with manual backpropagation, Leaky ReLU activation, and soft-max classification achieving up to 94% test accuracy with minimal overfitting (1% train-test gap).
- Implemented L2 regularization, momentum gradient descent, and mini batch training to optimize convergence and prevent overfitting across 500 epochs on 10,000 augmented samples.
- Designed data augmentation pipeline (rotation, translation, Gaussian noise) to triple training data, improving generalization and boosting accuracy by over 5%
- Built real time Tkinter interface with live inference capability and modular architecture supporting model versioning and experimentation.

• Soccer League Database Management System (DBMS)

Built a full stack soccer league DBMS with a normalized relational schema, CRUD operations, and a web based interface.

- Tools & Technologies: Oracle SQL, Flask, Python, HTML/CSS
- Collaborated with three member team to design full soccer league DBMS, defining system requirements, user roles, and entity relationships across 10+ database tables.
- Designed and implemented database schema in Oracle SQL with full 3NF and BCNF normalization, ensuring data integrity and eliminating redundancy.
- Built Flask based web UI supporting core CRUD operations, user friendly data views, and real time query execution against SQL database.

EXPERIENCE

• Bimen Business Consultants

05/2025 - 08/2025

Project Coordinator

Toronto, ON

- Developed a PowerShell automation script for a client to sort and file 500+ legal documents daily, eliminating manual processing and implementing email notifications with error reporting.
- Supported technical infrastructure migration during a client's ownership transition, including server provisioning, data migration, and user account creation for employees.
- Coordinated a client's cross border warehouse relocation project, managing timelines and communication across multiple technical and logistics teams.
- Performed quality assurance testing for client software rollout, documenting bugs and providing UX improvement recommendations that influenced multiple feature updates.
- Conducted on site technical support including malware removal, server maintenance, hardware installation, and network cabling for enterprise environments.

• Wireless Freedom

10/2022 - 04/2023

Intro to Commercial Web Development (Volunteer)

Toronto, ON

- Used Laravel, a full stack web development framework to create a basic locally hosted website.
- Used K Nearest Neighbours to predict a client's next purchase based on previous purchases.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL

Frameworks & Libraries: NumPy, Pandas, Flask, Tkinter, OpenCV, Pillow

Concepts: Data Structures & Algorithms, Object Oriented Programming, Database Normalization, Neural Networks

Coursework: Data Structures, Algorithms, Databases, Operating Systems, Computer Security

Interests: Machine Learning, Full Stack Development, Systems Programming, Software Development

ACHIEVEMENTS

• General Scholarship (Value \$3000) x3 (Total \$9000)

Requires: GPA 4.15+
